Backend : Ruby,Ruby on Rails

Database: Postgres

Project-2

URL: <http://mobilehome.net>

Project Name: Niche-Investment

Role: Developed many modules and write unit test cases

Duration: 1.5 year

Project Desc:

MobileHome.com is a USA real estate database website, where people can sell or purchase home. All sites under it run in a single project and use single database to manage data, here user can create their account then upload property description with images.

We implemented payment system where user do payment to display their property. We fetched lots of data from third party user in the form of XML or Json then stored it in our database. Here visitor can search property based on location, price, date and many more options are available.

Implemented "Saved Search feature" where if any user wants free email alert about any new property, then they can get it as well.

Team Size : 2

Skills : Ruby(1.9.3), Ruby On Rails(3.2).

Platform : Linux.

Versioning : Git

Database : MySql

Other : Agile methodology, AWS, S3, RackSpace, Regular Expression, Used many linux system command as per requirement.
