Professional Summary

- **Over 7+ years** of industry experience in web application development and maintenance using different Open Source Technologies such as **Angularjs, Angular 2, Angular 4, Scss, PHP, Ajax, JavaScript, HTML, Bootstrap**
- Proficient in **PHP, HTML, Angular 1.x, Angular 2, SCSS**
- Good knowledge of **PHP and PHP Frameworks**
- Experience in using Restful API Development using **PHP Frameworks**
- Experience in working with different databases such as **MSSQL**, **MySQL, PostgreSQL, MongoDb**
- Familiar with **Java, Oracle PL/SQL**.
- Extensive experience in application development, maintenance, support
- Worked on multiple projects designed for technology upgrade

Technical Skills

Operating Systems	WINDOWS XP, Windows 7, Linux
Analysis & Design tools	Microsoft Office Visio 2010/2007
Tools & Languages	**Front-End**: Angular 1.x, Angular 2, Angular 4, Scss, Ajax, JavaScript, HTML5, jQuery, Bootstrap **Back-End**: PHP, Java, REST Services, WordPress, Code-Igniter, Moodle, Yii Framework
Databases	MySQL, PostgreSQL, MongoDb, MsSQL

Company: Xoriant Solutions Pvt. Ltd (Apr 2017 - Till Date)
Project History

- **Web application for client from Market Intelligence and Data analytics Domain**
  Client: Course5i
  Team Size: 10
  This application is designed to Save time of survey creation with the minimum errors for survey programming industry with the help of artificial intelligence. A SAAS portal through which user can view, edit the data analysis of AI and retrain AI if required. AI will retrain itself whenever a manual intervention takes place in the data analysis provided by AI.
  User can add custom rules which will be useful in understanding the market and getting more accurate data analysis. This Product is combination of AI and user inputs to make data analysis and market study more accurate and resulting in better results of products. All the UI developed in angular 1.6 with all backend processing written predominantly in Spring Hibernate. We were involved in developing Application UI and server side services from the scratch for the application and solved the related defects raised in UAT of pre-Beta release.
    - Coordinated with business users for Requirement gathering of the modules
    - Integrated HTML and Css provided for all pages in the application.
    - Customized Sorting directives to meet requirements.
    - Customized Css and HTML wherever required.
    - Written base structure of Angularjs code.
    - Written code for 6 complex modules which will be creating nested json structure.

- Written Custom reusable functions like getting an index in nested array recursively.
- Custom added custom table directive to handle copy and pasting data from any other source.
- Part of code reviewer team
- Proposed and integrated modular approach for code base which includes separating business logic from controller.
- Integrated Gulp for generating a build and minified version of files as a bundle.
- Acting as Lead for UI related work of this product.

- **Web application for client from Banking and Finance Domain**
  Client: Citi
  Team Size: 6
  An Admin portal through which Deals and subsequent Tasks related to deals are created for MMF and ADR modules. This application is more of migration from Flex to angular and all the UI developed in angular 4.x using primeng components with all backend processing written predominantly in Spring Hibernate. We were involved in developing Application UI and server side services from the scratch for the application and solved the related defects raised in UAT.
  - Coordinated with business users for Requirement gathering of the modules
  - Developed HTML and Scss for all pages in the application.
  - Customized Primeng Components to meet requirements.
  - Customized CWT 2.0 as base theme for web framework.
  - Written generic Ag grid Scss to be used for any project with using ag grid.
  - Written Custom SCSS for Primeng to match existing look and feel of website.
  - Implemented angular modular structure and angular 4 routing for all modules.
  - Added code for basic unit testing of environment setup using Jasmine and Karma.
  - Written Custom pipes reusable components like date, amount.
  - Implemented custom angular translation for multilingual support
  - Updated Java services response and added new services wherever required.

Company: Parallel Minds (Jan 2013 - Feb 2017)
Project History

- **Web Framework for client from Printing Industry**
  Client: Pezasys
  Team Size: 5
  This web framework is for client, working into Printing Industry . Developing Web UI using AngularJS, HTML provided by client, with Yii on server side and database used is MySQL. Identified and integrated angularjs controls on 109 HTML pages in current project. Working on integration of services and testing. Challenging part was removing dependency of jQuery since most of plugins used were jQuery plugins. Some directives needed to be customized to meet the requirements.

- Creating a custom single-page web application that provides a platform to manage printing business needs efficiently.
- Press owner can generate estimates, and create printing jobs from approved estimate.
- Press workers can use this system to automate their day to day work.
- Press owner can see detailed report like profitable area wise as well as profitable customer.
- Press owner with multiple press can access and manage multiple press effectively.

Highlights:

- Integration of AngularJS control with all the existing 109 HTML pages.
- Implementation of different Angular plugins like Date picker, calendar, image uploader and preview for registration.
- Development as well as bug fixing faced in current implementation of AngularJS website.

- **Web Framework for client from Australia**
  Client: PMW
  Team Size: 5
  This web framework is for an existing client from Australia, working into Real Estate and Property field. Developing Web UI using AngularJS, CSS of existing site with C# on server side and database used is SQL Server.
  Identified and migrated 37 pages from ASP.NET to AngularJs in current project. Working on integration on services and testing. Challenging part was removing dependency of jQuery since most of plugins used were jQuery plugins. Some directives needed to be customized to meet the requirements.
    - Creating a custom single-page web application that provides a platform to manage real estate and property dealings efficiently.
    - Owner can give his property on lease and can create lease agreement online.
    - Tenant can pay rent online using this platform.
    - Property wise account summary will help owner to get an idea of Income and Expense.
    - Owner with multiple properties can access and manage properties more efficiently.
  Highlights:
    - Migration of all the existing pages to AngularJS.
    - Implementation of different Angular plugins like Date picker, full page calendar for displaying upcoming events.
    - Development as well as bug fixing faced in current implementation of AngularJS website.

- **Web Framework for client from Music Industry**
  Client: Jambber
  Team Size: 2

Radhey Kulkarni – 7+ years of experience
Angular 1.x, Angular 2, Angular 4, Scss, Web Development,
HTML5, CSS
Email- radheykulkarni@gmail.com

This web framework is for a client company which is mainly into Music Industry and providing a platform for artists to showcase their talents and requirements. Web UI is developed using AngularJS, Bootstrap 3 with C# on server side and database used is MongoDB.

Highlights:
- Application implemented as a single-page, AngularJS client.
- URL routing handled by default router, allowing us to divide the application into logical modules (templates and controllers).
- Used custom directives for re-usable components (multi-field form elements, multiple file uploads, etc.).
- Made extensive use of promises for application control flow
- Bug fixing and new feature development along with enhancement of existing features as per client requirements.

Challenging part was:
a. Multiple file upload and to multiple folders. AngularJS supports single file upload but requirement was to have minimum three file upload control on same form. To achieve this wrote a custom directive which constructed form data depending on parent file control.
b. Required to construct custom url which can be shared among users and shared url should display only allowed data depending on the user roles.
c. Customized and integrated jQuery html5audio with AngularJS.

- **Security Domain-Web Framework**
  Client: Cyphort
  Team Size: 3
  This web framework is for a client company which is mainly into security domain and providing solution for monitoring data security and data leak using packet filtering. Developed using Python, PHP, Java, jQuery and database used PostgreSQL. Operating system used is Linux VM.
  Responsibilities:
    o Bug fixing for new version release.
    o New feature development with tight lines as per client requirements.
    o Involved in debugging, resolving defects, and enhancement
    o Worked as Code reviewer for India and US team

- **Tablet- Style store**
  This web framework of a client is a web application for updating stiles, deleting stiles for a tablet. User can upload their stiles to the website through device.
  Responsibilities:
    o Requirement Gathering, Documentation and Analysis of functional requirement.
    o Involved in Project setup and development.
    o Written REST web services using Codeiginter framework.
  Tools and Technologies:
    - Php, MySQL, JavaScript, jQuery, REST Services, CodeIgniter Framework

- **File share application**

Radhey Kulkarni – 7+ years of experience
Angular 1.x, Angular 2, Angular 4, Scss, Web Development,

Email- radheykulkarni@gmail.com
Mobile : +919975298133

Developed website for client company from Africa for file sharing, using which files can be shared securely with the respective user. Admin Users can create user for sharing files and grant/ revoke access to the shared files.

This was also used to share large files which cannot be shared via email.

Responsibilities:
- o Analysis of functional requirement.
- o Involved in all phases of website development.
- o Database design and modification

Tools and Technologies:
- ▪ PHP, MySQL, JavaScript, jQuery

- **Astrological Website**

  Developed an astrological website with PayPal integration.

  Responsibility:
  - o Planning and implementing new features.
  - o Planning and maintaining administrator section.
  - o Develop application from scratch.

  Tools and Technologies:
  - o PHP, Html, CSS, MySQL, JavaScript, jQuery

Personal Details:
- Date of birth: 8th May 1987
- Gender: Male
- Marital status: Single
- Languages known: English, Marathi, Hindi
- Nationality: Indian
- Hobbies: Coin Collection and Reading
- Pan number: BZCPK1643R
